Direct Environmental Impacts

Company A's direct environmental impacts are given below. Trucost has reviewed your reporting and incorporated your quantitative disclosures where possible. In the absence of reporting, we have estimated your environmental profile. Please review the data and revise as necessary. All estimates will be updated to reflect revisions provided.

Type	Source	Quantity	Company Comments / Revisions
Green House Gases (Tonnes)			
Carbon Dioxide Equivalent	AR	918,902	
Carbon Dioxide To Air	AR*	907,224	
Dinitrogen Oxide (Nitrous Oxide) To Air	AR*	29	
Methane To Air	AR*	133	
Smog Precursors (Non VOC) (Tonnes)			
Particulates To Air	AR*	234	
Carbon Monoxide To Air	AR*	10,728	
Acid Rain Precursors (Tonnes)			
Nitrogen Oxide To Air	AR*	14,900	
Sulphur Dioxide To Air	AR*	841	
Ammonia To Air	TC	3.47	
Volatile Organic Compounds (Tonnes)			
Sum of VOCs To Air	AR*	2,767	
General Waste (Tonnes)			
Landfill	OTH	3,000	
Metals (Tonnes)			
Lead To Air	AR*	0.08

General Comments (if any)

Direct environmental impacts are those impacts that a company has on the environment through their own activities. For example, the CO₂ emissions generated by a boiler owned by a company would be a direct impact, whereas the CO₂ emissions resulting from the generation of electricity provided by a third party supplier would be considered an indirect impact. This Trucost analysis requires the separation of these two types of impact.

Type:

Trucost has carried out extensive studies of industries to ascertain the amount of over 700 environmental resources used and substances emitted, per unit of output. These cover both the use of the environment's resources, such as water or timber, and substances emitted, such as carbon dioxide or landfill waste.

Source:

The source of direct environmental quantity data is identified and divided into estimates and company disclosures. Trucost estimates a company's direct impacts using an analysis of the business activities they are involved in. Trucost also searches for any public disclosures that have been made by the company and incorporates them where appropriate. In some cases, disclosed data is used to derive estimates for direct impacts (e.g. production-based estimates of emissions).

Quantity:

Quantities of resources used or pollutants emitted. The information must relate to the same reporting period as the financial accounts. All quantities are expressed in tonnes or cubic metres. All quantities must cover the company's entire operations and correlate with the financial year (as noted on this report), in order for our analysis to remain consistent.

Further information on how to report on environmental impacts:

- Department for Environment, Food and Rural Affairs, Environmental Key Performance Indicators, Reporting Guidelines for UK Business. <http://www.trucost.com/defrakpi.html>
- GHG Protocol Initiative. <http://www.ghgprotocol.com>
